Unit 7 Pre-Test

Scatterplots & Two-Way Tables

Standards assessed: NC.8.SP.1–SP.4

Name: _____ **Date:** _____ **Period:** _____

SCORE 3.0 Basic Understanding

NC.8.SP.1 Describe patterns of association in bivariate data.

- *I can describe associations in scatterplots and name their key features.*

Match each vocabulary term to its definition, then answer each question.

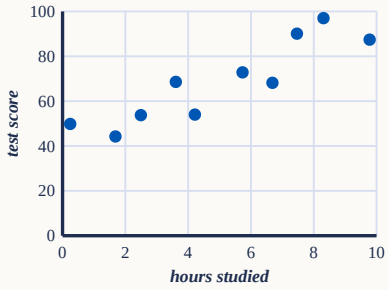

– scatterplot	**A.** As one variable increases, the other tends to increase.
– positive association	**B.** A data point that lies far away from the rest of the data.
– negative association	**C.** A graph that plots paired data as points.
– outlier	**D.** As one variable increases, the other tends to decrease.
– line of best fit	**E.** A straight line drawn to model the trend in a scatterplot.
– cluster	**F.** A group of data points bunched closely together.

1. *Association*

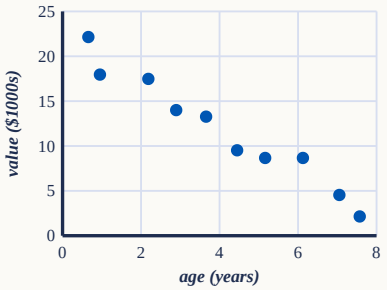

As study time increases, test scores increase. Positive or negative association?

2. *Association*

As a car's age increases, its value decreases. Positive or negative?

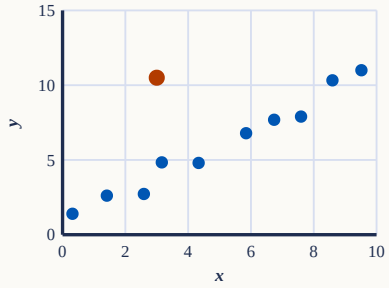

Answer: _____

Answer: _____

3. *Vocabulary*

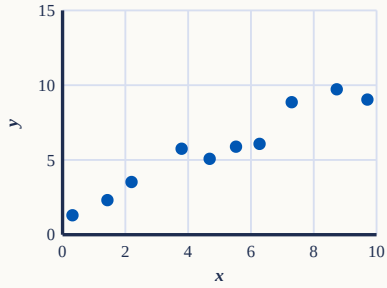

A point lying far from the pattern is called a(n) ___.

Answer: _____

4. *Vocabulary*

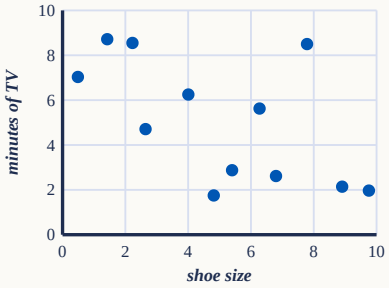

A graph of paired data points is called a ___.

Answer: _____

5. *Association*

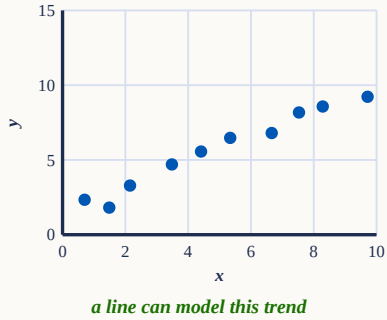

If x and y show no pattern at all, there is ___ association.

Answer: _____

6. *Vocabulary*

A line drawn to model the trend of a scatterplot is the line of ___.

Answer: _____

SCORE **4.0** **Target Content**

NC.8.SP.3, NC.8.SP.4 Use a line of best fit to predict, and read two-way tables.

• *I can use a line of best fit to make predictions and read values from a two-way table.*

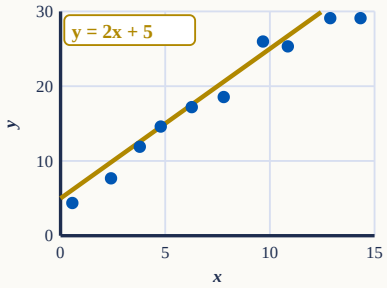

Use the line of best fit and the two-way table to answer each question.

Two-way table — use for the questions below

	Likes Pizza	Does Not	Total
Boys	12	8	20
Girls	15	5	20
Total	27	13	40

7. *Predict*

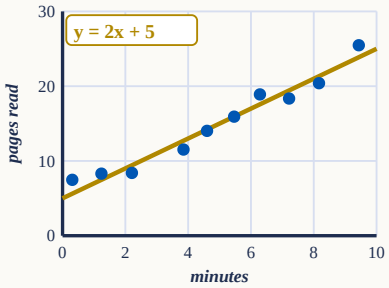

Line of best fit y = 2x + 5.
Predict y when x = 10.

y = _____

8. *Predict*

Line of best fit y = 2x + 5.
Predict y when x = 0.

y = _____

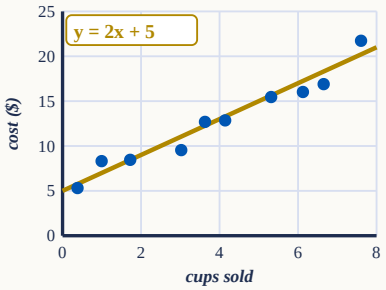

9. *Interpret*

In y = 2x + 5, by how much does y increase for each increase of 1 in x?

10. *Two-way table*

From the table, how many students like pizza in all?

students = _____

y increases by _____

11. *Two-way table*

From the table, how many girls were surveyed?

girls = _____

12. *Two-way table*

From the table, how many students were surveyed in total?

students = _____

SCORE 5.0 Advanced Content

NC.8.SP.4 Interpret relative frequencies and the meaning of slope in context.

• *I can find relative frequencies from a two-way table and interpret slope in a real situation.*

Use the two-way table above and each best-fit line to answer.

13. *Relative freq.*

From the table, what percent of boys like pizza?

percent = _____

14. *Relative freq.*

From the table, what percent of girls like pizza?

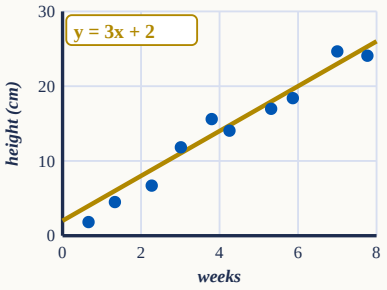

percent = _____

15. *Predict*

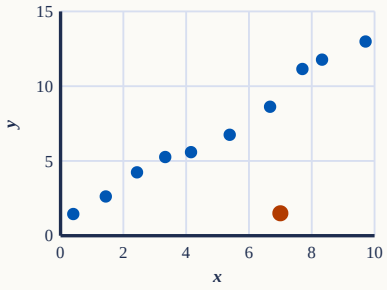

Best-fit line for plant height: y = 3x + 2. Predict the height at x = 6 weeks.

16. *Vocabulary*

A scatterplot rises left to right, but one point sits far below the rest. That point is a(n) ___.

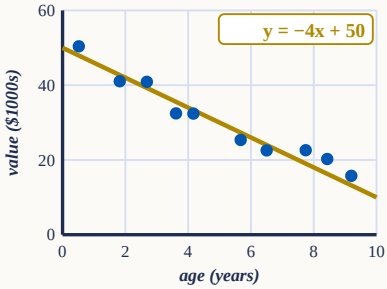

y = _____

Answer: _____

17. *Interpret*

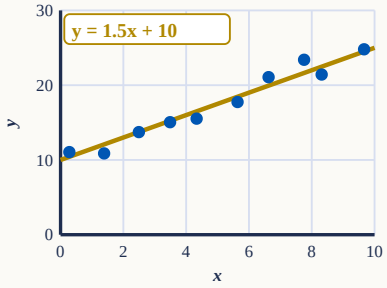

Value vs. age: y = −4x + 50, where y is the value in $1,000s. How much does the value drop each year?

Answer: _____

18. *Predict*

Line of best fit y = 1.5x + 10. Predict y when x = 8.

y = _____
