📦 Unit 9: Volume Practice

Cylinders · Cones · Spheres · Composite Solids · NC.8.G.9

Name: _____ Date: _____ Period: _____

Cylinder: $V = \pi r^2 h$ **Cone: $V = \frac{1}{3}\pi r^2 h$** **Sphere: $V = \frac{4}{3}\pi r^3$**

π ≈ 3.14 · Always use cubic units · Remember: radius = diameter ÷ 2

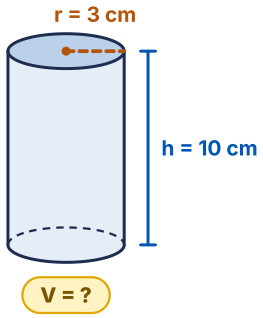

💡 **Tip:** A cone is exactly ⅓ of a cylinder with the same dimensions. When you see "diameter," divide by 2 to get radius first!

🥫 Cylinder Problems

Problem V1

A cylinder has radius 3 cm and height 10 cm. What is the volume? (Use π ≈ 3.14)

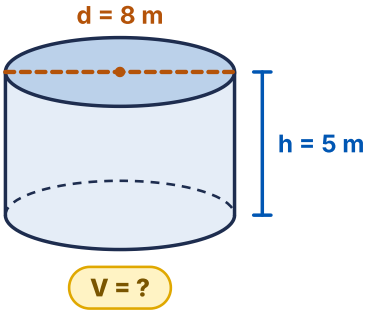

- ○ 282.6 cm³
- ○ 94.2 cm³
- ○ 188.4 cm³
- ○ 1130.4 cm³

Problem V4

A cylinder has diameter 8 m and height 5 m. What is the volume?

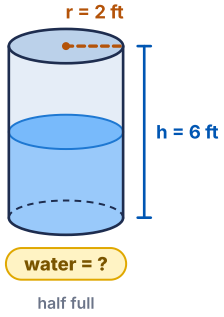

- ○ 80π m³
- ○ 160π m³
- ○ 320π m³
- ○ 40π m³

Problem V10

A cylindrical water tank (r = 2 ft, h = 6 ft) is half full. How much water is inside?

- ○ 12π ft³
- ○ 24π ft³
- ○ 6π ft³
- ○ 8π ft³

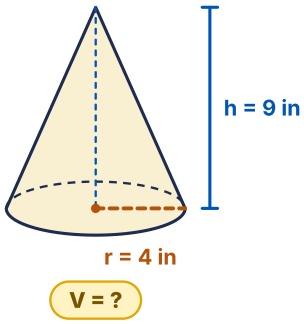

🍦 Cone Problems

Problem V2

A cone has radius 4 in and height 9 in. What is the volume?

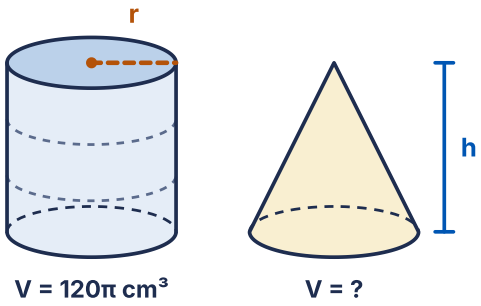

- ○ 64π in³
- ○ 48π in³
- ○ 452.16 in³
- ○ 36π in³

Problem V5

A cone and cylinder have the same radius and height. The cylinder's volume is 120π cm³. What is the cone's volume?

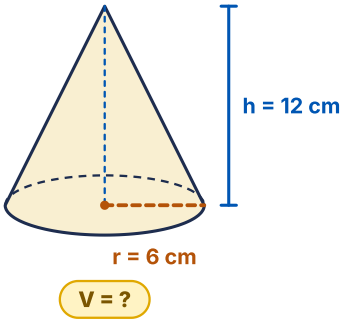

- ○ 40π cm³
- ○ 60π cm³
- ○ 360π cm³
- ○ 80π cm³

Problem V7

A cone has radius 6 cm and height 12 cm. What is the volume? (Use π ≈ 3.14)

- ○ 432π cm³
- ○ 452.16 cm³
- ○ 1356.48 cm³
- ○ 226.08 cm³

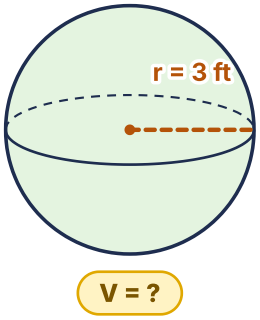

🏀 Sphere Problems

Problem V3

A sphere has radius 3 ft. What is the volume?

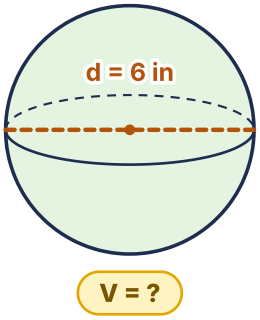

- ○ 36π ft³
- ○ 27π ft³
- ○ 84.78 ft³
- ○ 108π ft³

Problem V6

A sphere has diameter 6 in. What is the volume?

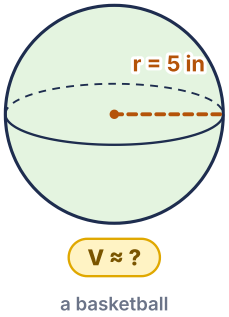

- ○ 36π in³
- ○ 288π in³
- ○ 12π in³
- ○ 27π in³

Problem V8

A basketball has radius 5 in. Approximately what is its volume? (Use $\pi \approx 3.14$)

- ○ 523.3 in³
- ○ 104.7 in³
- ○ 392.5 in³
- ○ 314.0 in³

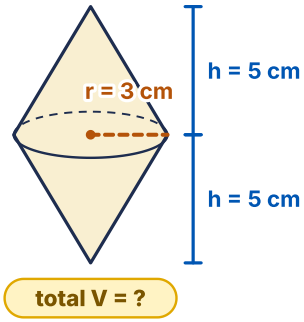

a basketball

📦 Mixed & Composite

Problem V9

Two identical cones are placed base-to-base. Each cone has r = 3 cm and h = 5 cm. What is the total volume?

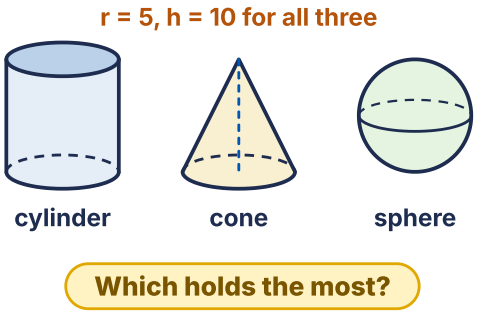

- ○ 30π cm³
- ○ 60π cm³
- ○ 15π cm³
- ○ 90π cm³

Problem V11

Which shape has the greatest volume? r = 5, h = 10 for all.

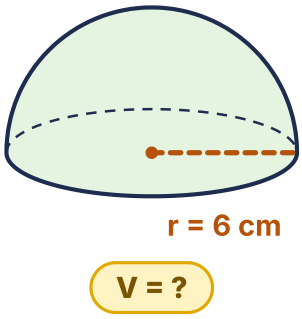

- ○ Cylinder
- ○ Cone
- ○ Sphere
- ○ They're all equal

Problem V12

A hemisphere (half sphere) has radius 6 cm. What is its volume?

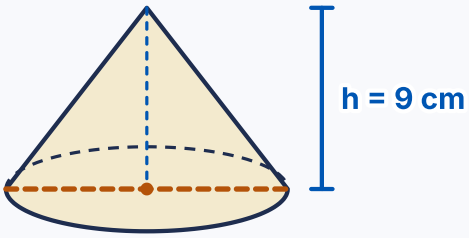

- ○ 144π cm³
- ○ 288π cm³
- ○ 72π cm³
- ○ 216π cm³

📝 Worked Examples

Study these step-by-step solutions before attempting the problems above.

Volume of a cone: diameter = 14 cm, height = 9 cm

diameter 14 → radius 7

Step 1: Identify r — diameter = 14, so r = 7

$r = 7,\ h = 9$

Step 2: Write the formula

$V = \frac{1}{3}\pi r^2 h$

Step 3: Substitute

$V = \frac{1}{3}\pi(7^2)(9) = \frac{1}{3}\pi(49)(9)$

Step 4: Multiply inside

$V = \frac{1}{3}(441\pi)$

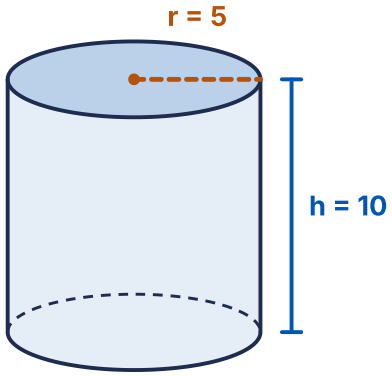

Step 5: Divide by 3

$V = 147\pi \approx 461.6\ cm^3$ ✓

🔍 Common Mistakes — Can You Spot the Error?

Each problem has a mistake. Identify what went wrong.

Cylinder: r = 5, h = 10

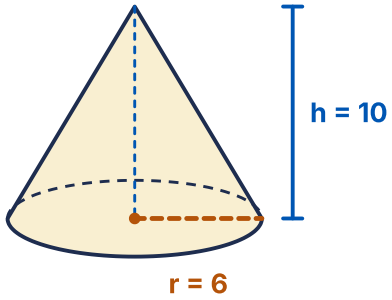

✗ **Student:** $V = \pi(5)(10) = 50\pi$

✓ **Fix:** Forgot to SQUARE the radius! $V = \pi(5^2)(10) = \pi(25)(10) = 250\pi$

💡 *The formula is $\pi r^2 h$ — that ² is critical!*

Cone: r = 6, h = 10

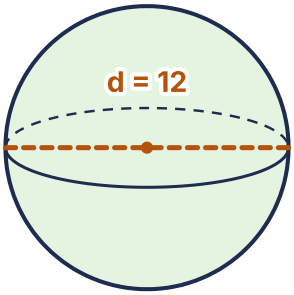

✗ **Student:** $V = \pi(6^2)(10) = 360\pi$

✓ **Fix:** That's the CYLINDER formula! Cones need ⅓. $V = \frac{1}{3}\pi(36)(10) = 120\pi$

💡 *A cone is always ⅓ of the matching cylinder.*

Sphere: diameter = 12

the 12 goes all the way across

✗ **Student:** $V = \frac{4}{3}\pi(12)^3 = \frac{4}{3}\pi(1728) = 2304\pi$

✓ **Fix:** Used DIAMETER instead of radius! r = 6, not 12. $V = \frac{4}{3}\pi(6)^3 = \frac{4}{3}\pi(216) = 288\pi$

💡 *Always check: did the problem give diameter or radius? Diameter ÷ 2 = radius.*
