Remember: Scatter plot: positive (both go up), negative (one goes up, the other goes down), or no association.
Line of best fit $y = mx + b$: m = rate of change, b = start value. **Two-way table**: relative frequency = $\frac{\text{part}}{\text{total}}$.
Example: 12 of 40 → $\frac{12}{40}$ = 0.3 = 30%.
