Problem 3 Score 5

Why does 4(x − 1) + 2 = 4x − 2 have infinitely many solutions?

A. After you simplify, both sides are exactly the same: 4x − 2.

B. The x-terms are the same, so there is no solution.

C. x = 0 is the only solution.

D. Any equation with 4x on both sides has infinitely many solutions.
