Unit 5 Pre-Test

Statistics: Center, Spread & Regression

Standards assessed: NC.M1.S-ID.1 · S-ID.2 · S-ID.3 · S-ID.6 · S-ID.7 · S-ID.8 · S-ID.9

Name: _____ **Date:** _____ **Period:** _____

SCORE 3.0 Basic Understanding

NC.M1.S-ID.1 · NC.M1.S-ID.2 · NC.M1.S-ID.6 Read data displays and find center and spread.

• *I can read dot plots, histograms, box plots, and scatter plots, and find the mean, median, and range.*

Answer each question. Use the picture to help you.

How to type your answers

number `6.5` negative `-2` word `median` letter `B`

1. *Mean*

Find the mean of 4, 7, 9, 10, 15.

mean = _____

2. *Median*

Find the median of 3, 8, 5, 12, 9, 6.

median = _____

3. *Range*

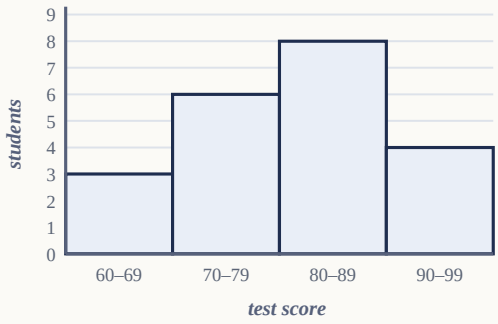

Find the range of 12, 18, 7, 25, 14.

range = _____

4. *Histogram*

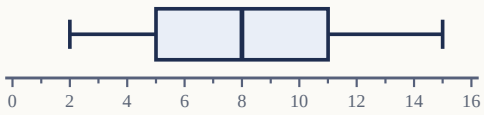

The histogram shows test scores. How many students are in the data set?

students = _____

5. *Box plot*

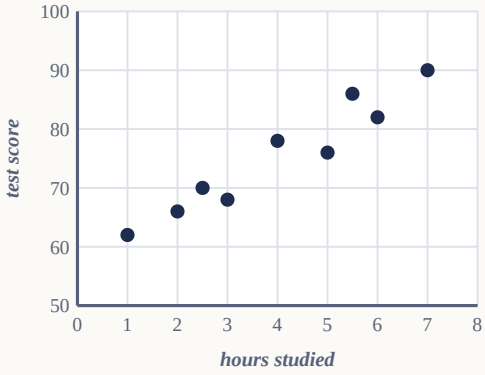

Use the box plot. What is Q3 (the upper quartile)?

Q3 = _____

6. *Association*

Describe the association: positive, negative, or none?

Answer: _____

SCORE 4.0 Target Content

NC.M1.S-ID.2 · NC.M1.S-ID.3 · NC.M1.S-ID.6 · NC.M1.S-ID.8 Use IQR and outliers, predict with a trend line, and read residuals and r.

• *I can find the IQR, test for outliers, predict with a trend line, find a residual, and match r to a scatter plot.*

Solve each problem. Show your work on paper.

7. *IQR*

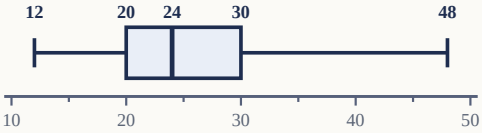

Find the interquartile range (IQR) of 2, 4, 5, 7, 8, 10, 12, 15.

IQR = _____

8. *Outlier?*

Use the 1.5 × IQR rule. Is 48 an outlier? Write yes or no.

Answer: _____

9. *Best center*

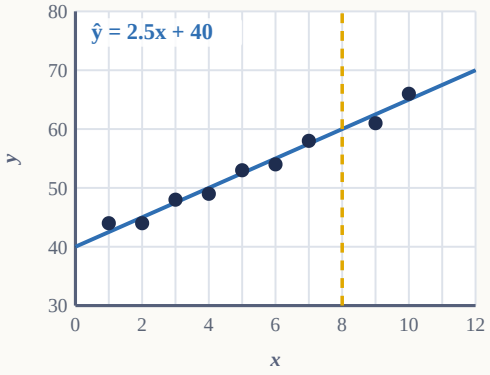

Data: 10, 13, 16, 19, 52. Which describes the center better: the mean or the median?

Answer: _____

10. *Predict*

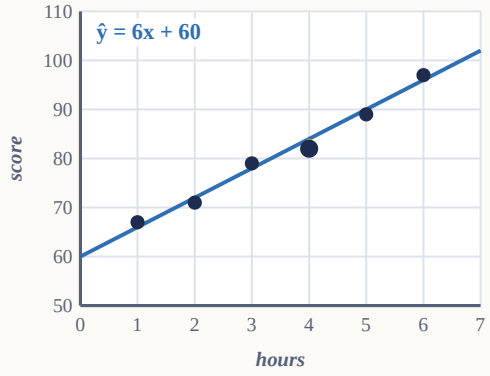

The trend line is $\hat{y} = 2.5x + 40$. Predict y when x = 8.

$\hat{y}$ = _____

11. *Residual*

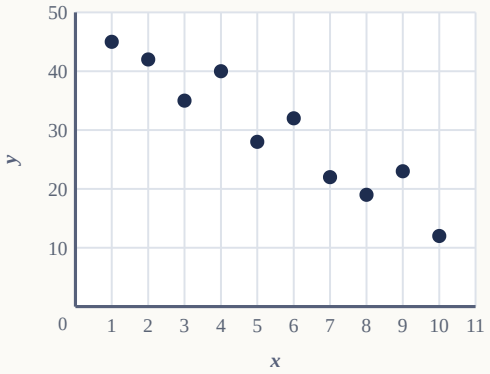

The trend line is $\hat{y} = 6x + 60$. A student studied 4 hours and scored 82. Find the residual.

residual = _____

12. *Correlation*

Which value of r fits this scatter plot best? −0.95, −0.3, 0.3, 0.95

r = _____

SCORE 5.0 Advanced Content

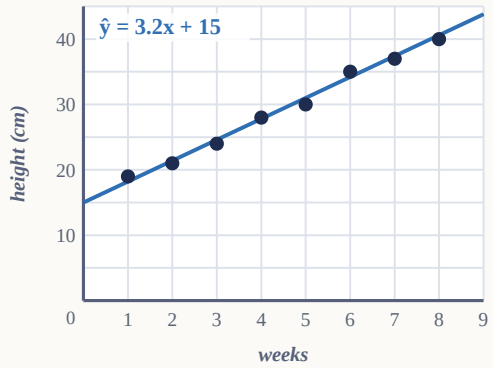

NC.M1.S-ID.2 · NC.M1.S-ID.7 · NC.M1.S-ID.8 · NC.M1.S-ID.9 Interpret models and compare data sets.

• I can explain slope and intercept in context, compare spread, judge correlation strength, and tell correlation from causation.

Solve each problem. Some answers are words.

13. *Interpret slope*

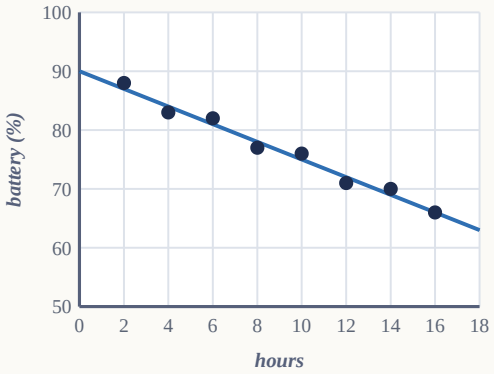

$\hat{y} = 3.2x + 15$ predicts plant height (cm) after x weeks. How many cm does the plant grow each week?

cm = _____

14. *Interpret intercept*

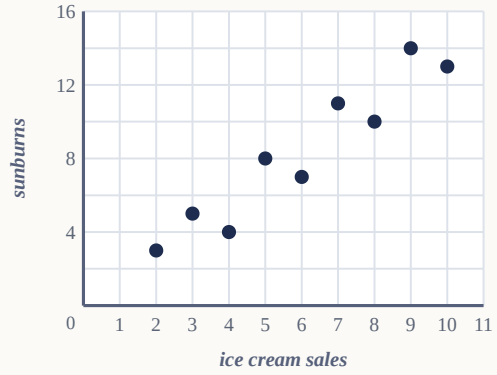

$\hat{y} = -1.5x + 90$ predicts phone battery (%) after x hours. What was the battery at the start (x = 0)?

percent = _____

15. *Causation?*

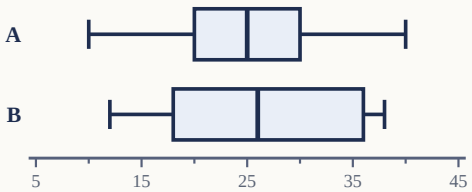

Ice cream sales and sunburns have a strong positive correlation. Does eating ice cream **cause** sunburns? Write yes or no.

Answer: _____

16. *Compare spread*

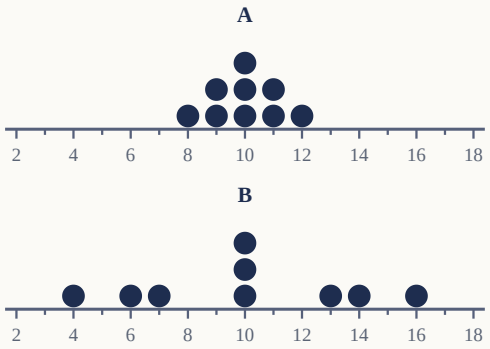

Which class has the greater spread, using the IQR: A or B?

Answer: _____

17. *Standard deviation*

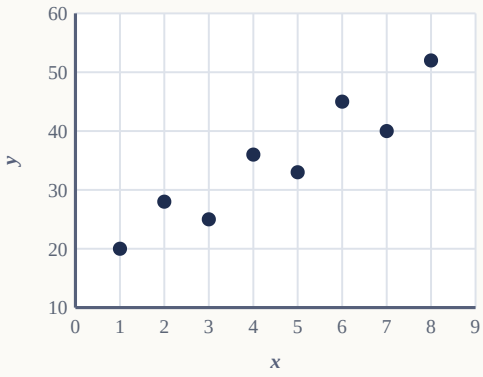

Both data sets have a mean of 10. Which has the greater standard deviation: A or B?

Answer: _____

18. *Correlation strength*

A data set has r = 0.92. Is the correlation strong or weak?

Answer: _____
