Remember: Standard form: $Ax + By = C$. **Point-slope form:** $y - y_1 = m(x - x_1)$, where m is the slope and (x_1, y_1) is a point. To change to $y = mx + b$, **solve for y**. Ex: $2x + y = 5 \rightarrow y = -2x + 5$. $y - 3 = 2(x - 1) \rightarrow y - 3 = 2x - 2 \rightarrow y = 2x + 1$.
