Remember: Function: each input has exactly one output. **Slope:** $m = \frac{y_2 - y_1}{x_2 - x_1}$. $y = mx + b$: m = rate of change, b = initial value. **Standard form** $Ax + By = C$ → solve for y. **System:** the solution is where the lines cross. Same slope + different b → no solution.

7 **Marco** solved $y = 2x + 1$ and $x + y = 10$. Find the mistake. Fix it.

MARCO'S WORK

$x + (2x + 1) = 10$

$3x + 1 = 10$

$3x = 9,\ x = 3$

Solution: $(3, 3)$
