Remember: Scientific notation: $a \times 10^n$ with $1 \le a < 10$. Big number → positive exponent. Less than 1 → negative exponent. **Multiply**: multiply the numbers, **add** the exponents. **Divide**: divide the numbers, **subtract** the exponents. Example: $(3 \times 10^4)(2 \times 10^5) = 6 \times 10^9$.
